

Abstract of the Disclosure

A method and apparatus for processing web documents, according to which a plurality of web documents are multi-browsed by managing the documents in an incorporated way, are provided. The web document processing method for incorporating and browsing a plurality of web documents at a terminal connected to a server through a network includes the steps of: obtaining web documents including at least a primary document; obtaining one or more secondary web documents specified in the primary document; storing data of the secondary web documents in corresponding predetermined storing portions; displaying document selectors associated with the secondary web documents on a screen of the terminal; and upon selecting one of the document selectors, displaying a secondary web document corresponding to a selected document selector on the screen of the terminal. Accordingly, the web processing method and apparatus enable users to view a plurality of documents or search results without moving from one web page to another, thereby saving surfing time on the Internet and increasing effective use of the Internet.
